

# Efficient ArcGIS administration

Discover powerful solutions to take your ArcGIS® Enterprise and ArcGIS Online environment to the next level. With our specialised applications for administrators, you will have everything you need to efficiently manage, secure and analyse your ArcGIS infrastructure. Learn more about the innovative products from our partner GEO Jobe and enhance the performance and security of your GIS environment.

## Admin Tools – Simplifying administrative tasks

With Admin Tools, you can effortlessly create and delete items, modify group memberships, adjust user properties such as user type, or copy web map symbology. Various administrative tasks related to items, users, groups and workflows can thus be automated and simplified. As these tasks can also be performed as bulk operations, the workload is reduced to just a few steps.

### Advantages

- Perform bulk operations on items, groups, users and workflows
- Easy introduction to ArcGIS administration
- System-wide search function and advanced filtering options
- Intuitive user interface
- Extended functionality for interacting with content
- Minimisation of effort for administrative tasks
- Significant time savings

## Backup My Org – Easy backup and restore

Backup My Org is a comprehensive solution for targeted backup, restoration and migration of your ArcGIS items, users and groups. This is especially important to protect against data loss or unintended changes. Create on-demand or scheduled backups, partial backups, or clone data between environments. An intelligent restore assistant helps you reconnect your data.

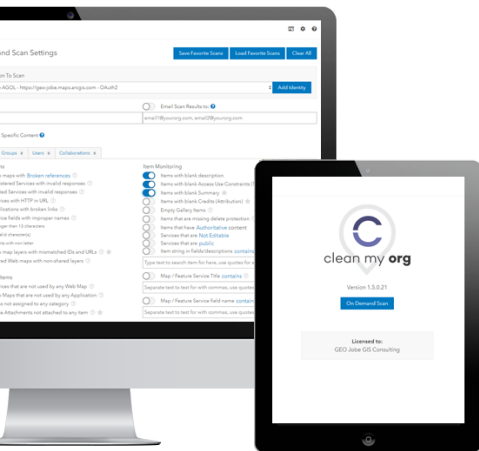

### Advantages

- Restore content at an individual or organisational level
- Clone data between environments
- Visualise data dependencies for targeted backup selection
- Create on-demand and scheduled backups
- Partial backups via filter settings
- Extensive functionality for data backup and transfer

# Clean My Org – Effective cleaning of your ArcGIS environment

With Clean My Org, you gain access to an on-demand and scheduled scanner that identifies common issues such as inactive users and groups, unused items and broken maps or references. Using the integrated solution tools, identified issues can be resolved with minimal effort.

## Advantages

- Easily review users with specific properties (e.g. no content)
- Intuitive group management
- Simple verification of collaboration functionality
- Continuous and clear cleaning of your ArcGIS environment
- Reduction of duplicates or unused items

# Scheduler for ArcGIS – Automation capabilities in ArcGIS

Scheduler for ArcGIS is the ideal software to effectively manage your ArcGIS environment with automated and scheduled workflows, keeping it up to date. The software allows the creation of code-free workflows, task execution based on your schedules and automation of actions based on real-time events or webhooks within your ArcGIS system. The Scheduler features an easy-to-use interface with a visual representation of workflows.

## Advantages

- Intuitive execution of scheduled and automated tasks
- Warning when sharing sensitive data
- Control over map services
- Optimisation of geodata and underlying tables
- Monitoring the performance of geoprocessing services
- Automated execution of administrative reports and custom scripts
- User-friendly interface with a visual representation of workflows, including success and error outputs
